2. Functional Requirements:

- User Authentication: A secure sign up, and a secure authentication system for tenants to ensure they can authenticate their tenants only.
- Community Resources: A community discussion board for tenants, an anonymous discussion board and access to renters rights and budgeting tools.
- Navigation- mobile-first tab navigation
- Data Persistence: Backend API, Database storage.
- Error Handling: Validation for invalid input, user friendly error messages.

3. User Stories

1. **As a renter**, I want to securely log into the app, so that I can access my rent and maintenance information without exposing personal data.
2. **As a renter**, I want to be able to anonymously report any complaints I have.
3. **As a renter**, I want to view my rent history and upcoming due dates, so that I can better manage my budget.
4. **As a renter**, I want to upload and access important documents like my lease, so that I have everything stored in one place.
5. **As a renter**, I want to join a community discussion board, so that I can share experiences and learn from other tenants.

4. User Journey Flow

1. User opens the app → sees the **Landing Page**.
2. User clicks login button -> Presses it
3. User logs in → redirected to **Dashboard**.
4. From Dashboard → user chooses one of the following:
 - **Community Squares**: To chat with your community
 - **Maintenance**: Submit or track request.
 - **Documents**: Upload or view files.
 - **Community**: Read/post in tenant forum.
5. After completing actions, user returns to Dashboard.
6. User logs out → session ends.
