

CSC425 Fall 2025

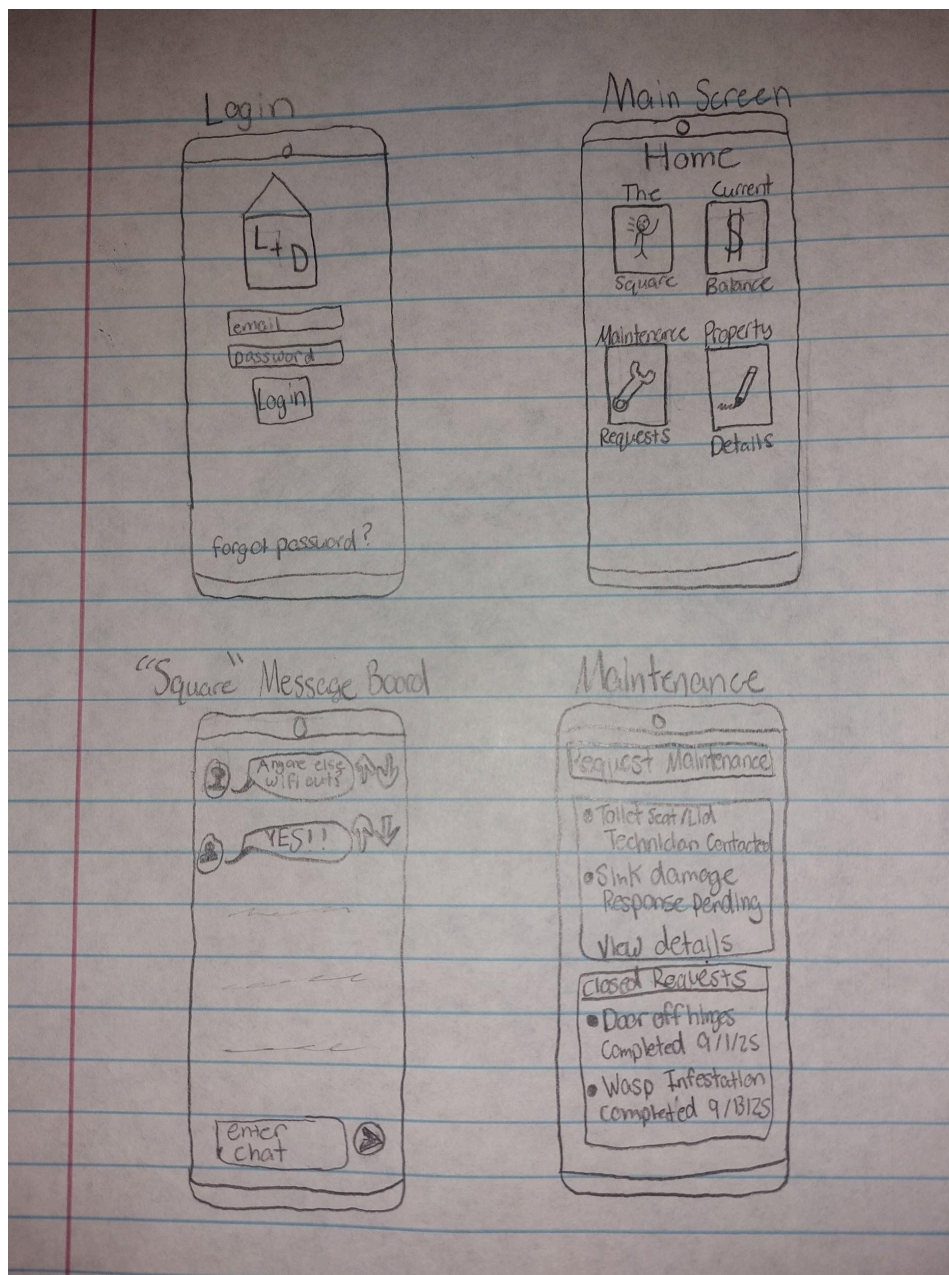

Student Name: Jolie Barger

Date Submitted: 9/21/25

GitHub REPO URL: <https://github.com/squirrelyCoding/CSC425Project.git>

Branch Name: d4-jolie-barger

1. Low-Fidelity Wireframes

2. Functional Requirements

- User authentication (sign up, login, logout)
- CRUD operations for maintenance requests (create, update, track, delete)
- Secure messaging system between tenants and landlords/RA's
- Document storage and access for leases, addendums, and receipts
- Rent tracking with payment history visibility
- Notification system for rent due dates, lease expirations, and maintenance updates
- Data persistence with backend integration
- Error handling & input validation for forms and login

3. User Stories

1. As a tenant, I want to log in securely with my email and password, so that I can access my personal lease information.
2. As a tenant, I want to submit a maintenance request with a photo, so that I can clearly show the issue to my landlord.
3. As a tenant, I want to view my rent payment history, so that I can prove I've paid on time if there's a dispute.
4. As a tenant, I want to message my fellow tenants within the app, so that I have a way to plug in with our community.

4. User Journey Flow

1. User opens the app → sees login screen.
2. User logs in successfully → redirected to dashboard.
3. User views dashboard with sections for Rent, Messages, Maintenance, and Documents.
4. User submits a maintenance request → fills form, attaches photo, submits → status updates available.
5. User checks Rent tab → views payment history and upcoming due date.
6. User accesses Documents → views/downloads lease and addendums.
7. User communicates via 'Square' tab → all conversations timestamped and saved.
8. User receives notifications about rent due, maintenance updates, and lease deadlines.
9. User logs out → session ends.
